

# Stop studying. Start passing.

Exam-eve triage: Solve decides what to study first, in what order, then tests you until you can teach it back.

THE PROBLEM

# Students don’t fail from too little material. They fail from bad triage.

### Too much

The syllabus is huge. Exams reuse patterns. Students re-read everything and cover nothing well.

### Too passive

Re-reading and videos feel like learning. Only recall, and explaining it back, proves it.

### Too late, too alone

Real studying happens in the last 24–72 hours, in WhatsApp groups at 2 AM.

**ChatGPT and NotebookLM answer questions. None of them decides what to study first.**

THE SOLUTION

# Solve decides what to study, in what order, and checks you got it.

1 **Ask: time, target, material**

2 **Triage: rank topics by marks per minute**

3 **Teach back: drill + viva**

4 **Re-plan: weak spots move up**

### Pass Probability

A live meter that rises as you prove topics, not as you read them.

### Marks-per-minute plan

Your hours and target grade become a ranked, time-boxed topic list.

### Source-anchored

Every answer points to the exact line in your material. No blind trust.

# Demo-ready in days. Designed to scale.

## In the MVP

PDF or link in → clean text → long-context LLM (no vector DB lag) → 3 parallel calls (plan, quiz, viva) → schema-validated JSON → Next.js UI. Diagrams generated as Mermaid, with source citations on every claim.

## On the roadmap

Community-vetted picks via official YouTube and Reddit APIs. Chrome extension for logged-in college portals (no passwords stored). WhatsApp clan bot. Regional-language support.

BUSINESS MODEL

# Priced like a recharge. Sold to clans.

### Exam Pack

24h, 3-day or 7-day pass. UPI. No auto-renew.

### Clan Pass

4 students split one bill, like a family plan.

### Booster

Top-up for large textbooks on exam night.

### Coaching API

Institutes turn question banks into Solve dashboards.

**Cost logic: outputs are cached per syllabus, so every extra student on the same exam costs less.**

MOAT AND IMPACT

# Every exam makes the next one smarter and cheaper.

## The Exam Graph

Per university, subject and unit: topic weight, question patterns, and which explanations actually worked. Built from student attempts, re-ranked automatically. Hard to copy without the same users.

## Pilot plan (targets, not claims)

Pilot with MITS students: score gain on a pre/post quiz, time to first quiz under 60 seconds, and 7-day return rate. Then expand to tier-2 and tier-3 colleges and regional languages.

TEAM AND NEXT 30 DAYS
